Ventilation system and its types

Clean and fresh air is the pledge of health. It is necessary that it surrounds a person not only on the street in the city of Rochester-H, but also at [home](#) or at work. With this task the ventilation system will help to cope. For classification of ventilation systems into varieties there are several characteristics. Supply and exhaust with recuperation. The first can be called the principle of functioning. It can be of supply, exhaust and combined type. In the first case, the ventilation system provides an influx of fresh and purified air from the street, which removes polluted from the room through door and window openings. The principle of operation of the [exhaust system](#) is understandable to many on the example of kitchen exhaust systems, without which no apartment in [Rochester-H](#) can do today, and even more so a special institution for cooking food. Supply ventilation to buy. With her help, polluted air is removed from the room, passing certain degrees of purification. However, the best variant of ventilation is combined, which combines the supply and exhaust systems. Thanks to it, the processes of displacement of polluted and inflow of fresh air are synchronized.

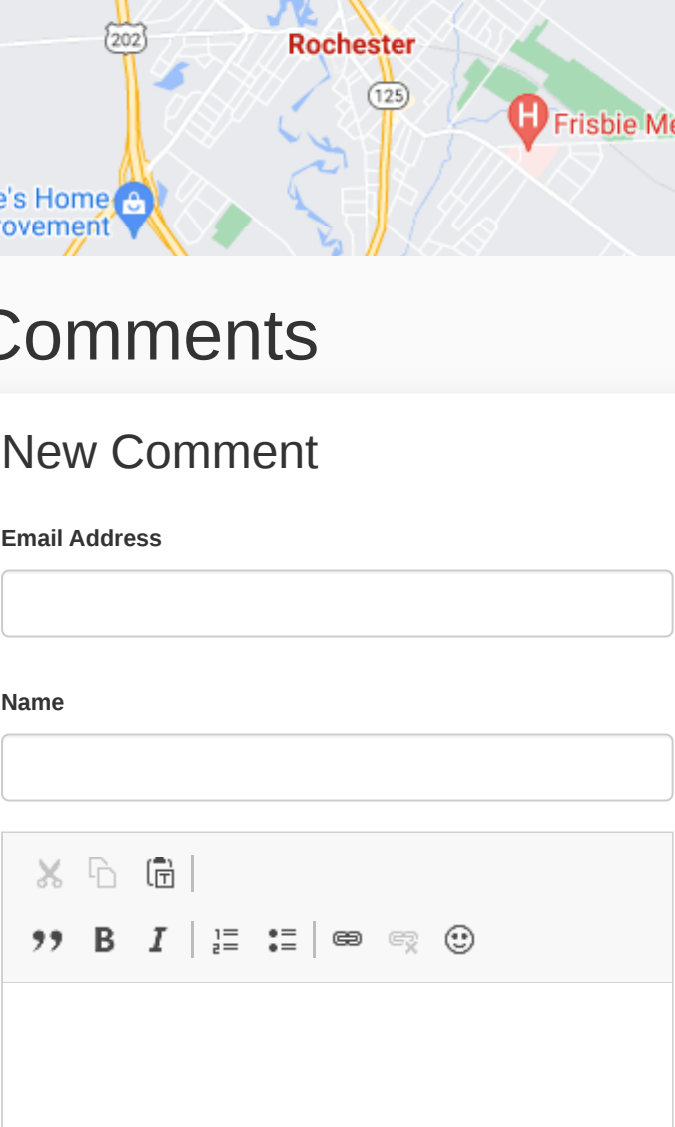

_555 Supply and exhaust ventilation system in the city of Rochester-H can guarantee ideal circulation of air masses in every [room](#). Depending on what territory the ventilation system captures, it is possible to define local and general exchange of its variants. Local installed then when there is an opportunity eliminate polluted air directly from the source of pollution. Local ventilation system installed both at home and at work. Ventilation scheme of the basement in a private house. In the case when remove polluted air does not work immediately, for understandable reasons, better will suit in Rochester-H is a [general exchange](#) ventilation system that will cope with cleaning of the entire room. The structure of components of ventilation systems also subdivides them into two variants: typesetting and monoblock. First, respectively, consists of several parts that are fixed remotely from each other. In the second all structural elements are placed in one housing. The monoblock system has important advantage, since equipped with equipment that isolates arising during functioning of devices, noise.
